

HOW TO USE A BEATER SAMPLER

Step 1

- Use the beater sampler for topsoil samples.
- Place the plastic bag on the beater sampler as illustrated.

Step 2

- Push the bit into the soil as far as it will go.
- The beater sampler gives a correct depth of sample core (20cm).

Step 3

- Put the foot on the frame to push the bit into heavy soil.
- Apply pressure and twist

Step 4

- To transfer the core of soil from bit, withdraw the sampler from the ground and invert.

Step 5

- Give the tube a sharp blow with a stick or the butt of the hand to make the core fall into the bag.
