

SOUTH AFRICAN SUGAR INDUSTRY AGRONOMISTS' ASSOCIATION

CODE: N32 x Ripening 84/04/Sw/Sim 'R'
CAT : 2202

CHEMICAL RIPENING OF N32 WITH ETHREL AND FUSILADE SUPER

1. PARTICULARS OF PROJECT

This crop	: 3 rd Ratoon	Age	: 11.9 months			
Site	: RSSC (Simunye)	Dates	: 27/6/2003 – 22/6/2004			
Field	: 604 Panel 14	Irrigation	: Fully irrigated (surface drip)			
Region	: Northern Irrigated (Swd)	Ripener application details:				
Soil Set	: 'R'		Date	Age(m)	Weeks	Purity%
Design	: Random. blocks, 5 reps	Ethrel	17/3/04	8.7	13.8	78
Variety	: N32	Fusilade	21/4/04	9.8	8.8	81
Plot size	: 4 rows x 17m x 1.5m (gross) 2 rows x 13m x 1.5m (net)					

2. OBJECTIVE

- To determine the response of variety N32 to Ethrel and Fusilade Super applied either alone or as a combination treatment.

3. TREATMENTS

1. Control
2. Ethrel 1.5 l/ha 14 weeks pre-harvest
3. Ethrel 1.5 l/ha at 14 weeks + Fusilade 0.2 l/ha at 9 weeks
4. Fusilade S. 0.2 l/ha 9 weeks pre-harvest
5. Ethrel 1.5 l/ha at 14 weeks + Fusilade 0.3 l/ha at 9 weeks
6. Fusilade S. 0.3 l/ha 9 weeks pre-harvest
7. Ethrel 1.5 l/ha at 14 weeks + Fusilade S. 0.45 l/ha 9 weeks pre-harvest
8. Fusilade S. 0.45 l/ha 9 weeks pre-harvest

Ethrel and Fusilade were applied with a CO₂ constant pressure knapsack sprayer and a hand held 'T' boom fitted with two TK 1.5 flood nozzles, delivering ± 52 l/ha over a swath width of 6m at 200kPa.

4. SAMPLING PROCEDURE

Groups of 4 stalks were taken from the net plot rows in a systematic manner on each sampling occasion to give a total of 16 stalks per plot. On subsequent occasions, sampling started one pace further into the plot and the same sequence of sampling was followed.

5. RESULTS AND DISCUSSION

Sample data

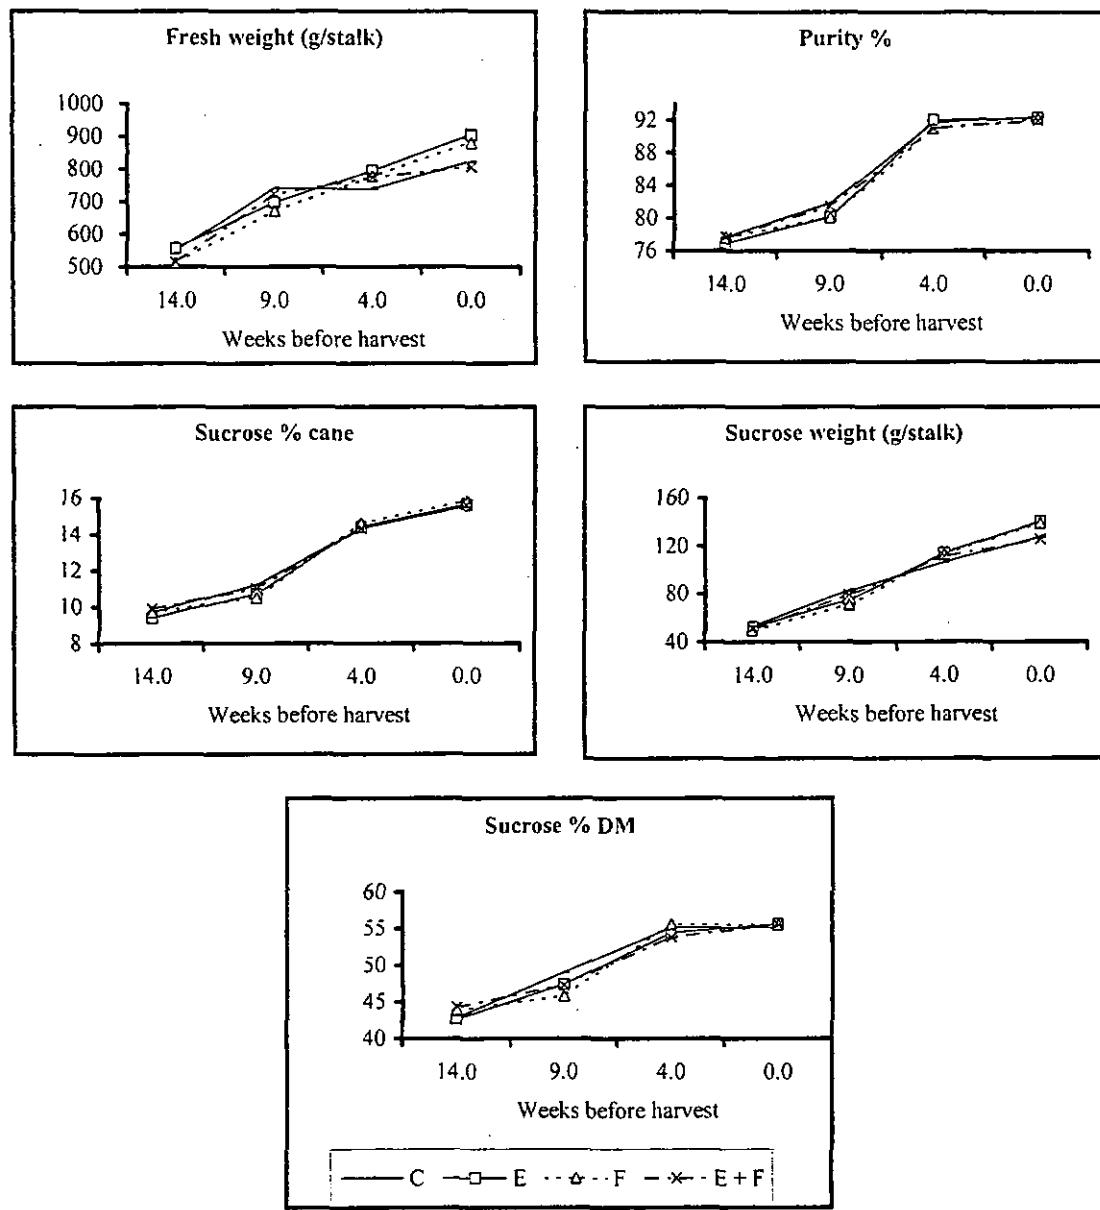

Juice purity averaged 77% when Ethrel was applied in March and 81% when fusillade was applied in April, which suggests that the cane was already mature to respond to Ethrel and sufficiently immature to respond to Fusilade (Appendix 1, Figure 1).

There were no significant differences in sucrose % cane and erc % cane (cane quality) at harvest, in response to ripener treatments. This suggests that ripener treatments were not effective at improving cane quality.

Although the combination of Ethrel and Fusilade gave the highest sucrose % dry matter at harvest, there were no significant differences when compared to the other treatments.

Trends in sucrose sample data up to harvest indicate that Ethrel may have had a growth stimulus effect by increasing stalk moisture content and stalk fresh weight at harvest (NS), with no associated increase in cane quality (Figure 1, Appendix 1).

Figure 1: Sample data (see notes)

Notes: F = mean of 0.2 l Fusilade/ha, 0.3 l Fusilade/ha and 0.45 l Fusilade/ha
E+F = mean of Ethrel plus 0.2 l Fusilade/ha, Ethrel plus 0.3 l Fusilade/ha and Ethrel plus 0.45 l Fusilade/ha.

Harvest Results

Treatments had no statistically significant effect on cane yield. A reduction in yields was noticed with the application of both ripeners, without necessarily improving cane quality (sucrose and erc % cane) (Table 1).

When compared to the control, a combination of the reduction in yields, with no gain in quality led to a reduction in sucrose and erc yields at harvest, suggesting that the ripener treatment were not beneficial in this trial.

Table 1: Yield and quality at harvest

Treatment	Tc/ha	Purity	Moist %	S%c*	Ts/ha*	Erc%c	Terc/ha
Control	116	92.4	71.8	15.5	18.1	14.4	16.7
Ethrel 1.5 l/ha @ 14w	110	92.3	72.0	15.6	17.1	14.4	15.8
Fusilade 0.2 l/ha @ 9w	104	92.3	71.4	16.0	16.6	14.8	15.3
Fusilade 0.3 l/ha @ 9w	110	92.1	71.4	15.7	17.4	14.5	16.0
Fusilade 0.45 l/ha @ 9w	106	92.2	71.6	15.8	16.7	14.5	15.5

CV (%)	6.7	1.1	1.0	3.9	8.0	4.5	8.2

* = Sucrose measured as pol

6. CONCLUSIONS

- The results show that there is no reliability in the response of N32 to ripeners. Contrary to the previous observation, cane yields reduced with the application of ripeners with no gain in quality
- There were no statistical differences among yields of sucrose or erc, with all ripener treated plots yielding less than the control.
- With the continued unreliability of ripening results for N32, the trial has been terminated. Under the current conditions of production, it can only be safe and economic not to recommend ripeners on N32.

BMS

19/10/2005
