SOUTH AFRICAN SUGAR INDUSTRY  
AGRONOMISTS' ASSOCIATION

Cat.No. : 1779  
Project No. :  
Code No. : HW 406/90/R3

Title: Post - emergence phytotoxicity on ratoon cane.

Objectives: Standard phytotoxicity programme.

1. Particulars of project:

|                     |                             |                               |     |       |     |     |    |

2. Objectives

Standard phytotoxicity programme.

3. Treatments

|    |                         | Rates (1 product/ha) |
|----|-------------------------|----------------------|
|    |                         | Handweeded           |
| T1 | Control                 |                      |
| T2 | Actril DS               | 1,25                 |
| T3 | Spotaxe                 | 2                    |
| T4 | Spotaxe                 | 4                    |
| T5 | Duplosan DP             | 3                    |
| T6 | Duplosan DP             | 6                    |
| T7 | Impi (ICIA 0051/diuron) | 3,33                 |
| T8 | Impi (ICIA 0051/diuron) | 6,67                 |

#### 4. Design

Design : Randomised block  
No replications : 6  
Whole plot size : 5 rows x 8m x 1.4m = 56 m  
Net plot size : 3 rows x 6m x 1.4m = 25,2 m  
Row spacing : 1.4m

#### 5. Chemical formulations used

| Product     | Formulation   | Active ingredient.   |
|-------------|---------------|----------------------|
| Actril DS   | 100 + 600 g/l | ioxynil + 2,4 - D    |
| Spotaxe     | 80 + 240 g/l  | dicamba + 2,4 - D    |
| Duplosan DP | 600 g/l       | dichlorprop - P      |
| Impi        | 150 + 300 g/l | sulcotrione + diuron |

#### 6. Application details

Treatment date : 29/11/1990  
Time : 6.52 am  
Applicator : CP3  
Nozzle : APM (green)  
Pressure : 150 KPa  
Output : 38,81 ml/sec  
Output : 27,72 ml/m<sup>2</sup>  
Method : Over the row

#### 7. Weather conditions

Treatment date : 29/11/1990  
General : Clear and warm  
Dew : Very slight  
Soil surface : Dry  
Wind : Calm  
Sunshine hours : 6,8  
Temperature (°C)  
    08h00 : 22,8  
    14h00 : 26,2  
Rainfall (mm)  
    On day of spray : 9  
    No. days to first rain : 1  
    At first rain : 16,2  
    In first 14 days : 97,7  
    Total for duration of trial : 891

8. Results

Table 1: Visual ratings of percentage leaf scorch and stunting (where 1 = very poor and 5 = no stunting) recorded at 11 and 36 days after spraying.

| — Treatment —  | Rate<br>(l product/ha) | % leaf scorch |     | Stunting |     |
|----------------|------------------------|---------------|-----|----------|-----|
|                |                        | 11            | 36  | 11       | 36  |
| T1 Control     | -                      | 0             | 0,7 | 4,9      | 4,8 |
| T2 Actril DS   | 1,25                   | 3,2           | 1,8 | 4,8      | 4,7 |
| T3 Spotaxe     | 2                      | 1,7           | 1,3 | 4,9      | 4,8 |
| T4 Spotaxe     | 4                      | 3,0           | 1,5 | 4,9      | 4,8 |
| T5 Duplosan DP | 3                      | 8,5           | 1,7 | 4,4      | 4,4 |
| T6 Duplosan DP | 6                      | 10,3          | 1,5 | 4,1      | 4,0 |
| T7 Impi        | 3,33                   | 10,7          | 2,3 | 4,6      | 4,8 |
| T8 Impi        | 6,67                   | 15,7          | 2,0 | 4,1      | 4,6 |

Table 2: The effects of herbicide treatments on stalk heights and populations at 111 and 202 days after spraying.

| — Treatment —  | Rate<br>(l product/ha) | Stalk heights<br>(cm to TVD) |     | Populations<br>(* 1000/ha) |     |
|----------------|------------------------|------------------------------|-----|----------------------------|-----|
|                |                        | 111                          | 202 | 111                        | 202 |
| T1 Control     | -                      | 133                          | 183 | 164                        | 144 |
| T2 Actril DS   | 1,25                   | 139                          | 185 | 165                        | 146 |
| T3 Spotaxe     | 2                      | 137                          | 193 | 169                        | 139 |

9. Comments

The new products were applied at the rate requested as well as at double this rate. All herbicides were sprayed alone to assess their individual phytotoxic effects on cane. The trial was accidentally burnt and had to be cut early.

**Actril DS**

Other than some very minor scorching soon after spraying, the standard treatment did not appear to influence the other yield parameters.

**Spotaxe**

The double rate of this product caused similar minor foliar scorch as the standard, but neither rate resulted in further measurable effects on the crop.

**Duplosan DP**

This herbicide produced more scorch than the previous two treatments, but this did not reflect in the stalk height measurements which were similar to the control for the double rate at both stages recorded. Both rates of the product lowered cane yield slightly, and although reductions were non-significant, it is suspected that the effects were real.

### **Impi**

The crop soon grew out of the initial leaf scorch that was recorded for both rates of this product, although symptoms were still evident five weeks after spraying (Table 1). Yield data indicates that the visual phytotoxic effects on the crop were only temporary as results for both rates vary only slightly (ns) compared to control (Table 3).

### **Conclusion**

At the rates tested, all the products other than Duplosan DP appear safe on cane when used alone. Growth suppression was obvious in the Duplosan DP plots early on, but unfortunately measurements were not recorded at this stage.
